CONCEPTUAL AND METHODOLOGICAL NOTES

Basic Information

INDEC foreign trade statistics are based on the Customs declaration forms that register the imports and exports of goods. Since 1995, complementary sources of information have been incorporated due to the lack of Customs declaration forms regarding certain export and import transactions which should be included in foreign trade statistics; this is the case of trade on electrical energy by bi-national entities such as Salto Grande, Yaciretá, and others.

Customs declaration forms are registered in an interactive entry system which controls the validity of the data, and allows to detect non-received documentation in order to request it to Customs.

Statistics Coverage

The main objective of the official statistics on ARGENTINE FOREIGN TRADE is to measure the change in the stock of material resources of the country resulting from the physical movement of merchandise between Argentina and foreign countries.

The transactions can be classified into two main groups: "ordinary transactions" and "transactions of special treatment".

In ordinary transactions importers and exporters receive or send goods through the usual exchange operations and there are no transportation peculiarities. These operations are included in the statistics and have been classified since 1995 according to the MERCOSUR Common Nomenclature also based on the Harmonized System.

There are some transactions of special treatment which are also included in the statistics such as:

- samples
- donations
- temporary admission of goods for processing
- Non-tangible objects as natural gas or electricity

Special treatment transactions excluded from statistics are:

- Goods consigned by the Government to their representatives abroad
- monetary gold
- luggage and personal belongings of international passengers

- goods in transit
- military goods
- trade between the continental Argentine territory and Tierra del Fuego, Antártida e Islas del Atlántico sur Special Customs Area.

COMMERCIAL SYSTEM

The national compilation of the international merchandise trade statistics is based on the special system (except electricity and trade between the continental territory and the Special Customs Area) by which imports and exports are registered on their way through customs, according to the United Nations Statistical Office definition. On the contrary, those countries which use the general trade system, register the transactions when goods cross the boundary of the national territory. This concept implies that the statistical frontier coincides with the geographic limits of the country, while for the special system the statistical border is the Customs frontier.

STATISTICAL PERIOD

For the compilation of imports, the statistical period corresponds to the dispatch time independently from the arrival of the merchandises to the country; at the same time, exports are registered according to the final load for shipment date.

VALUES

The value assigned to exports is an FOB-type value (free on board), on the port or loading place of the merchandise. It means that the transaction price also includes the cost to deliver the goods to the port or loading place.

The imports are registered on a CIF-type basis (cost, insurance, and freight), although information on imports FOB valued is also available. The CIF value includes the FOB value plus freight and insurance (duties are excluded) to deliver the merchandise from the port or loading place to the first port or place of arrival in Argentina.

Values expressed in currency other than American Dollars, are converted into that currency according to the monthly average exchange rate, calculated by Banco de la Nación Argentina (buyer for the exports, seller for the imports).

TRADING PARTNER

Imports can be classified according to the country of consignment or origin. The definitions recommended by the Customs Cooperation Council are:

Country of consignment is the country "from which goods were initially dispatched to the importing country without any commercial transactions taking place in intermediate countries".

Country of origin is the country "from which goods have been produced or manufactured according to the established criteria to apply Customs tariffs, quantity restrictions or any other trade-related measure".

Initially, INDEC published imports data according to the consignment country. Since 1995, the country of origin has been officially used to define the Argentine imports partner country, but the information regarding the country of consignment continued to be elaborated. Data related to the country of origin have been available since 1987.

Exports are classified according to the country of destination. Country of destination is the country "declared at the moment of shipment as the country where merchandise will finally be delivered".

For imports and exports statistics, data by country are grouped in two different manners: by continent or by a specific economic area. Since January 2001, INDEC has introduced a methodological change in the registration of foreign trade statistics in response to the relevant international recommendations. These changes will contribute to the harmonization of economic statistics and the improvement of their international comparability.

The implemented changes apply only to foreign trade operations in Customs-free zones. In the former system of special registration, applied until 2000, imports included goods passing from Customs-free zones to the Customs-controlled territory. Under the current system, goods are registered upon their entrance to the free zones. Similarly, in the former system, exports included the goods leaving Customs-controlled territory and entering the free zones. With the current system, goods are registered as exports when they leave the free zone limits for a foreign destination.

This decision has been applied to foreign trade statistics since 1997, when the first Customs-free zones started operating in Argentina.

For this reason, as previously announced, INDEC will inform in its annual publication, "Comercio Exterior Argentino", year 2000, the corrections covering the Argentine foreign trade between 1997-1999.

As from January 2004, exports and imports performed under the current regime have been included.
